

DOT Medical Clearance Request

Mitral Valve Regurgitation (MR)

In accordance with Federal Motor Carrier Safety Administration (FMCSA) guidelines, we respectfully request your professional opinion regarding this driver's ability to safely operate a commercial vehicle given their history of **Mitral Valve Regurgitation (MR)**. The medical examiner will use your clinical input to determine whether this driver's condition and treatment are unlikely to interfere with the ability to safely operate a commercial motor vehicle.

PATIENT NAME	DATE OF BIRTH

FMCSA Guidelines — Mitral Valve Regurgitation (MR)

For certification, please confirm:

- **Severity classification:** mild, moderate, or severe mitral regurgitation
- Driver is currently asymptomatic — no dyspnea, fatigue, orthopnea, or paroxysmal nocturnal dyspnea
- Left ventricular size and function are normal or preserved
- No atrial fibrillation, pulmonary hypertension, or thromboembolic complications
- Treatment has been shown to be adequate, effective, safe, and stable
- If post-surgical repair or replacement: minimum 3-month waiting period completed, asymptomatic, tolerating medications, and cleared by cardiologist

The following are disqualifying:

- Any symptoms likely to cause syncope, dyspnea, or collapse
- Severe MR with left ventricular dysfunction, atrial fibrillation, pulmonary hypertension, or ruptured chordae or flail leaflet
- Unable to achieve **>6 METs** on Bruce Protocol
- Thromboembolic complications following valve repair or replacement
- Pulmonary hypertension with normal pulmonary artery pressure exceeded

Commercial Driver Physical Demands

Commercial motor vehicle operation places substantial physical demands on drivers that extend well beyond the act of driving. Drivers are routinely required to load and unload cargo, couple and uncouple trailers requiring full range of motion to climb, grip, and pull, lift and install tire chains weighing between 35 and 90 pounds, and tarp open trailers requiring lifting motions of 50 to 100 pounds — often after extended periods of sitting without a stretching period. In addition to these labor demands, drivers must maintain sustained perceptual alertness, control an oversized steering wheel, operate manual transmissions, maneuver large vehicles in confined spaces, and safely enter and exit the cab, which is physically comparable to climbing a ladder. These combined physical and cognitive demands should be carefully considered when determining this driver's fitness for commercial driving duties.

DOT Medical Clearance Request

Mitral Valve Regurgitation (MR)

Provider Certification

- ☐ **CLEARED** — The driver meets the above requirements and in my clinical opinion is medically cleared to safely operate a commercial motor vehicle.
- ☐ **NOT CLEARED** — The driver does not meet the above requirements and in my clinical opinion cannot safely operate a commercial motor vehicle at this time.
- ☐ **CLEARED WITH DISCRETION** — The driver does not meet one or more guidelines; however, in my clinical opinion the driver is safe to operate a commercial motor vehicle for the following reason(s):
